

FOR IMMEDIATE RELEASE

CineCert Introduces CLIPSTER® 7 as a Software-Only Solution

Software-based deployment provides greater flexibility, scalability, and infrastructure choice for modern content mastering workflows.

BURBANK, Calif. — June 2026 — On Monday, June 22nd CineCert announced the availability of CLIPSTER® 7, the latest version of its industry-trusted mastering solution. For the first time, CLIPSTER is available as a software-only solution, providing media organizations with greater flexibility in how they deploy, scale, and manage their mastering operations.

Designed for today's evolving media environments, CLIPSTER 7 can be deployed on commercial off-the-shelf (COTS) hardware or within virtualized infrastructure, enabling facilities to integrate mastering capabilities into the infrastructure that best meets their operational and business requirements.

“When we invested in CineCert, we did so with the goal of continuing to evolve its industry-leading products and services and this release is the next natural step in the evolution of Clipster. CineCert's value to the industry is unmatched, and we will continue to invest in innovation and expanding its offerings” says Howard Kiedaisch, Chief Executive Officer of DCDC.

Now incorporating support for third-party video adaptors, CineCert's CLIPSTER 7 combines the proven performance, compliance, and reliability that have established CLIPSTER as the industry's trusted mastering system with enhanced platform flexibility across today's content production and distribution workflows.

“We are committed to maintaining CLIPSTER's quality and reliability in contemporary computing environments, while continuously advancing capabilities across HDR, collaborative workflows, flexible licensing, quality control, and so much more. All of this fronted by a best-in-class user experience and supported globally by our highly experienced team of technicians and media technology experts” says John Hurst, Co-Founder of CineCert.

CLIPSTER 7 is designed to support the demanding requirements of feature film, episodic, broadcast, and streaming content mastering, helping organizations streamline versioning workflows while adapting to increasingly flexible IT infrastructures.
